The General Motors 60° V6 engine family was a series of 60° V6 engines which were produced for both longitudinal and transverse applications. All of these engines are 12-valve cam-in-block or overhead valve engines, except for the LQ1; which uses 24 valves driven by dual overhead cams. These engines vary in displacement between 2.5 and 3.4 litres (2,490 and 3,350 cc) and have a cast-iron ...

The 3.5 was an evolution of the old 60 degree V6 and seemed to finally be a pretty solid engine after taking care of the 3100/3400 intake issues. I don't really want a vehicle I'll be spending \$\$\$ on due to a poor design resulting in high labor costs, but a 100K warranty is something I'll be taking into consideration also.

The crankshaft harmonic balancer is a device connected to the front of an engine's crankshaft, usually built into the crankshaft pulley. Its purpose is to absorb and reduce harmonic vibrations from the engine as the crankshaft rotates, as harmonic vibrations at high engine speeds can cause accelerated wear and damage to the components.
