Generator Gasoline Engine Diagram - gardemypet.com

The diagrams above show how to wire the system, starting with the 12v generator made with the automotive alternator, going to the battery bank to keep it charged. This battery bank in turn supplies the needed 12v input for the 110v inverter(s) which can then be wired directly into the house breaker box.

Building an Generator With an Alternator to Power Your ...

Acquire an engine. The required engine size is dependent on the amount of power that the generator will need to supply. A good rule of thumb for a useful, compact generator is to choose an engine in the range of 5 to 10 horsepower. Note that most engines rate their horsepower at a speed of 3,600 rotations per minute (RPM).

No. Never run the generator indoors, in a garage or in an enclosed area. Portable generators are designed to run outside where there is plenty of ventilation. You need to position your portable away from doors and windows so that the exhaust fumes do not get inside the house. The produced carbon monoxide gas can cause serious poisoning.
