Virtual Bone LabWe need our bones to walk, run, jump and move, but this is not all they do. Bones are very busy even when you are sleeping at night. They are where blood cells are made and store most of your body's calcium. Bones are also very good at repairing themselves. In this lab you can explore the bones of the human skeleton using our skeleton viewer that can also be

### Higher Education Support

Support: Like a house is built around a supportive frame, a strong skeleton is required to support the rest of the human body. Without bones, it would be difficult for your body to keep its shape and to stand upright. Protection: Bones form a strong layer around some of the organs in your body, helping to keep them safe when you fall down or get hurt. . Your rib cage, for example, acts like a ...

### Bone Anatomy | Ask A Biologist

The width (diameter) of a human hair ranges from very fine (0.017 mm) to very coarse (0.181 mm). The right image shows a fine human hair at 1,000 x magnification. The hair width is 0.070 mm or 70 micrometers. With the unaided eye the single hair shaft is visible when placed on a sheet of white paper.

### APA Style Introduction // Purdue Writing Lab

Organs are the body's recognizable structures (for example, the heart, lungs, liver, eyes, and stomach) that perform specific functions. An organ is made of several types of tissue and therefore several types of cells. For example, the heart contains muscle tissue that contracts to pump blood, fibrous tissue that makes up the heart valves, and special cells that maintain the rate and rhythm of ...
