Molecular neuropharmacology. Molecular neuropharmacology involves the study of neurons and their neurochemical interactions, and receptors on neurons, with the goal of developing new drugs that will treat neurological disorders such as pain, neurodegenerative diseases, and psychological disorders (also known in this case as neuropsychopharmacology). There are a few technical words that must be defined when relating neurotransmission to receptor action:

Neuropharmacology - Wikipedia

If a foundation wall crack is wider than ½-inch, have a pro take a look. Although many larger cracks may still turn out to be harmless, it's a good idea to have a foundation contractor or a ...
