Colligative properties Certain properties of dilute solutions containing non-volatile solute do not depend upon the nature of the solute dissolved but depend only upon the concentration i.e., the number of particles of the solute present in the solution. Such properties are called colligative properties.

Colligative Properties. A dilute solution is one in which the amount of the solute is very small in comparison to the amount of the solvent. The dilute solutions show more or less ideal behavior as the heat and volume changes, accompanying the mixing of solute and solvent, are negligible for all practical purposes.

A colligative property is a property of a solvent that depends on the amount of solute particles dissolved in it. It does not focus on the identity or nature of those solute particles, meaning it depends more on how many particles of each solute or solvent is in the solution, and on which type of particle is the solvent or the solution.
